Laminati

Laminat ili ultrapas je tanki fleksibilni dekorativni materijali koji se isporučuju u listovima ili rolama i služe za oplemenjivanje površina različitih materijala kao npr. iverice ili MDF-a. Odlikuju se većom tvrdoćom i otpornošću na mehanička oštećenja, toplinu, vodu, vlagu, razrijeđene kiseline i otapala. Proizvodi se prešanjem nekoliko slojeva dekorativnog papira impregniranih melaminskim smolama i većeg broja listova pergamentnog papira koji čini osnovu laminata gdje broj listova definira debljinu samog laminata. Prešanje se odvija pod visokim tlakom i temperaturom, a u tom postupku se definiraju sva mehanička i estetska svojstva laminata. Najčešće se upotrebljava za oblaganje radnih ploha, za oblaganje uredske, laboratorijske i radioničke opreme, oblaganje namještaja itd.
